# Case Study

```
<button appClickWithWarning>Delete</button>
```

ANGULAR  
**ARCHITECTS**  
INSIDE KNOWLEDGE

SOFTWARE  
**ARCHITECT**

# Simple Example

```
@Directive({
  selector: '[appClickWithWarning]'
})
export class ClickWithWarningDirective implements OnInit {

  constructor(private elementRef: ElementRef) { }

  ngOnInit(): void {
    this.elementRef
      .nativeElement.setAttribute('class', 'btn btn-danger');
  }
}
```

# Templates and ViewContainers

# Example: Tooltip

```
[<input [appTooltip]="tmp1">] ← - ViewContainer
```

```
<ng-template #tmp1>  
  <h3>2 Tips for Success</h3>  
  <ol>  
    <li>Don't tell everything!</li>  
  </ol>  
</ng-template>
```

ANGULAR  
**ARCHITECTS**  
INSIDE KNOWLEDGE

SOFTWARE  
**ARCHITECT**

# Implementation

```
@Directive({
  selector: '[appTooltip]'
})
export class TooltipDirective implements OnInit {

  @Input('appTooltip') template: TemplateRef<unknown>;

  constructor(private host: ElementRef,
               private viewContainer: ViewContainerRef) { }

  ngOnInit(): void {
    this.viewContainer.createEmbeddedView(this.template);
  }
}
```

ANGULAR  
ARCHITECTS  
INSIDE KNOWLEDGE

SOFTWARE  
ARCHITECT

# Implementation

```
export class TooltipDirective implements OnInit {  
  
    private viewRef: EmbeddedViewRef<unknown>;  
    @Input('appTooltip') template: TemplateRef<unknown>;  
  
    constructor(  
        private host: ElementRef,  
        private viewContainer: ViewContainerRef) { }  
  
    ngOnInit(): void {  
        this.viewRef = this.viewContainer.createEmbeddedView(this.template);  
        [...]  
    }  
}
```
